

Mary E. McAndrews  
Lasting Looks of Sarasota, Inc.

Microdermabrasion/ Chemical Peel Consent Form

A Microdermabrasion/ Chemical Peel is not a "cure-all" treatment, but for appropriate conditions, it can provide you with marked improvement. It is important that you have a thorough understanding of what treatment can and can't do for your particular condition.

I, \_\_\_\_\_, give my consent for Mary McAndrews to perform a Microdermabrasion/ Chemical peel on my face to treat the following conditions:

\_\_\_\_\_

\_\_\_\_\_ I understand that I am going to have an herbal peel, an alpha hydroxy, a salicylic acid peel or a microdermabrasion peel.

\_\_\_\_\_ I understand that this is a superficial peel that normally creates at most, up to 4-7 days of mild redness and areas of flaking skin.

\_\_\_\_\_ The peel program was explained to me in detail and I was provided with the opportunity to ask questions.

\_\_\_\_\_ Mary McAndrews has explained to me what benefits I can realistically expect to see from the peel program.

\_\_\_\_\_ I understand that this is a program of treatments and that I may need several peels to achieve the best results.

\_\_\_\_\_ I understand that the degree of improvement I can expect to see depends on many variables and therefore cannot be guaranteed.

\_\_\_\_\_ I understand that strict adherence to the aesthetician's instructions is necessary to ensure my best results.

\_\_\_\_\_ I understand that the skin peel may produce a mild stinging or burning sensation immediately after the application, but it will stop.

\_\_\_\_\_ I understand that the healing process of the peel will take about 4 to 7 days depending on my skin and the peel process used.

\_\_\_\_\_ I understand that my skin may look darker in areas as a result of the treatment. It is my choice to go to work or take time off until the peeling process is complete.

\_\_\_\_\_ I have been honest in all of the information that I have provided to the aesthetician regarding my physical history.

\_\_\_\_\_ I do not have a condition of herpes simplex (cold sores or fever blisters).

\_\_\_\_\_ I do not have a condition of scarring or keloids of the skin.

\_\_\_\_\_ I understand that although complications are rare, they occur. Prompt recognition and treatment of any complication is necessary to decrease its potential danger. It is extremely important that I follow the instructions exactly and that I notify the facility if I have any of the following complications:

- 1) Skin infections- usually appearing as a red tender area.
- 2) Cold Sore- on the lips or face area
- 3) Allergic Reaction- excessive swelling or rash
- 4) Appearance of thick scars or keloids in the areas of my peel.
